45163 is a 4-6-0 Black Five steam locomotive designed by William Stanier for the London Midland & Scottish Railway. It was built by Armstrong Whitworth in 1935 and worked mainly in the north of England and Scotland until it's withdrawal from service in 1965. Locomotives of this type worked all over the country and would have worked trains into the eastern region coming to places such as Cambridge on trains from the midlands. 45163 was sold for scrap in 1966 and went to the now famous Barry scrapyard in South Wales from where so many steam locomotives have since been saved. 45163 was rescued from the scrapyard by a private buyer in 1987 and some limited restoration work was started. The locomotive was then put up for sale and purchased in 1991 by 45163 Ltd for restoration and eventual use at the Colne Valley Railway at Castle Hedingham in Essex.

The 45163 Restoration Group is set up for those that do not wish to become shareholders but would still like to be able to help with the restoration of this locomotive and receive regular news of restoration progress through our newsletter 'Black Track'.

The cost of membership is just £16.00 per year for a single Adult or £25.00 per year for a Family.
